

Kent Ozkardesh

Secretary

Kent Ozkardesh is currently a process control software engineer with AECOM bringing 30 years of software experience to help start up Hanford's Waste Treatment Plant (also referred to as the Vit Plant).

Kent received a Chemical Engineering degree from the University of Houston in 1983 and was introduced to the world of software immediately out of school with his first job programming and configuring process control systems for Du Pont. After 10 years of control system applications, Kent found his real passion with developing process plant simulators for operator training at the Savannah River Site in Aiken, South Carolina. Kent was transferred to Hanford in 2001 to develop the Vit Plant's operator training, then supported the plant information systems, and now supports the process control systems.

Kent became an ASQ member and Certified Software Quality Engineer in 2011.
